

SUPERTRAPP®

GET YOUR MOTOR RUNNING

STREET / DIRT 08

INNOVATIVE STYLE.

HORSEPOWER GAINS.

PEAK PERFORMANCE.

TUNABILITY.

YES, WE KNOW WHAT RIDERS WANT.

Adventure.

Life is an adventure in itself. We are all adventurous throughout our journey in life. The adventures we've anticipated and already experienced. The ones we sought out. The unexpected and spontaneous adventures. The ones we've yet to embark on. What kind of adventures will your life take you on? Where have you been? Where do you want to go? What do you want to see? Who do you want to experience your adventure with? How do you want that adventure to make you feel?

These are all questions we are faced with each day. As unique as our adventures may be, one thing remains constant. We all want to get the most out of each and every one of our adventures.

Whether its cruising the open road on a Harley, hanging out at a motorcycle rally with your crew and your beloved metric, doing wheelies on your sport bike, slinging mud on an ATV in east Texas, riding the trails, racing at the track or watching everyone rubberneck as you drive your customized car or truck down the street – it's your adventure!

For more than 30 years, SuperTrapp has helped riders maximize the experience of their adventure with the ultimate in performance exhausts. Our exhausts aren't your every day, bolt it on just to look cool exhausts – these provide you with everything you could want and more. SuperTrapp exhausts offer everything from the coolest and most unique styles to conventional looking pipes – from drag pipes announcing your arrival to quiet pipes ensuring your neighbors will speak to you tomorrow – from tunable, allowing you to adjust the sound, torque and exhaust flow to non-tunable exhausts with proven horsepower and performance gains without having to add or subtract discs.

People question perfection and some think it is unobtainable. SuperTrapp breaks through that barrier of what others perceive as "unobtainable" by experiencing each and every imaginable adventure. We get out there with you, the riders. Sure, we have a state of the art dyno, our own in-house R&D department and a staff composed of riders and enthusiasts. We also have the passion to get out there and test our products the way you want to know they've been put to the test.

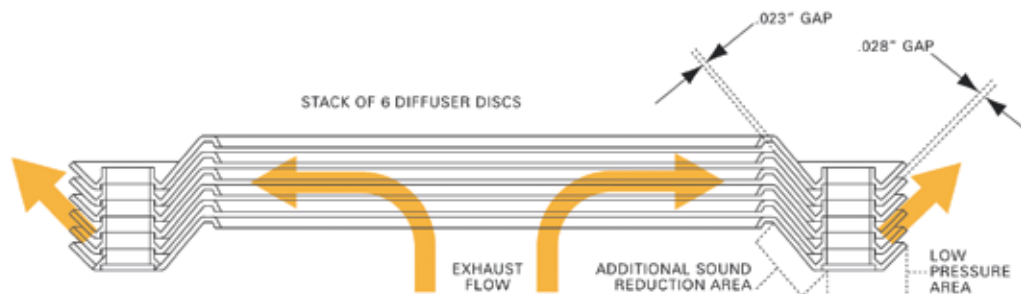

We understand there's adventure in all of us, but most importantly we understand and have designed performance exhausts tailored to your specific adventure wants and needs. So, to make sure your adventure is everything it can be, get your motor running and be sure to take SuperTrapp along for the ride – that's the way to experience the adventure of a lifetime!

How They Work

The tunable disc design was developed 30 years ago by an avid dirt bike rider and aeronautical engineer. The gap between the radial discs is smaller on the inside than it is on the outside. This creates an expansion chamber which allows the exhaust gases to move faster from the high pressure inside of the exhaust to the low pressure outside. The low pressure helps pull the exhaust gases out of the motor which in turn allows more fresh air and fuel to enter the motor on the next stroke. This is what is meant by a scavenging effect. More exhaust out. More fresh air and fuel in. More torque and horsepower out!

How to Use Them

Think of each disc as a hole in the exhaust. Using more discs increases the exhaust area, increases peak horsepower and increases sound output. Using fewer discs reduces the exhaust area, improves low end torque and reduces sound output. Each of our exhaust systems comes with a recommendation of the number of discs to use but with some simple experimenting, you can find the sweet spot or optimum balance between peak horsepower and peak torque. They also let your exhaust system grow with future performance enhancements to your motor.

Sound Level Guide

Sound is a very popular topic these days. It really needs to be broken down into two categories. Sound quality and sound volume. All of our exhaust systems are designed to produce a quality sound. Our non-tunable products have a deep, rich, throaty sound while our tunable products have a low tone and a distinctive sound. The sound volume is dependent on the flow characteristics of the exhaust and on your use of the volume control in your right hand, better known as the throttle. The sound icons throughout this catalog are there to show you the differences between the sounds of our products.

How They Work

These exhausts use more traditional methods of modifying the exhaust stream. Baffle tubes and chambers are used to make the exhaust travel a longer distance inside the canister and to reduce its velocity. Slowing down the exhaust stream allows it to remain in contact with the packing materials longer. These materials absorb the higher frequency sound waves. The sound quality can also be altered by changes in baffle configuration. As the sound waves travel through the exhaust canister, they can be bounced off of surfaces and reflected back against themselves to alter the frequencies or tone of the sound.

How to Use Them

All non-tunable exhaust have fixed performance characteristics. They have been designed to perform optimally under a very specific set of conditions and you do not have the ability to make changes to the exhaust itself. In most cases you will be required to make jetting or fuel map changes to your motor in order to use these products. The installation instructions included with each product will tell you what changes need to be made to your motor. Non-tunable exhausts are popular because they have a lower initial cost and appear to be easier to install but in the long run, they limit your ability to make future performance enhancements.

INDICATES EXHAUSTS NEAR STOCK LEVELS FOR STREET APPLICATIONS AND WITHIN LIMITS FOR RACE APPLICATIONS. SYSTEMS WITH QUIET CORE OPTIONS WILL BE AT THE QUIET END WHILE RACE CORE CHOICES WILL BE SIGNIFICANTLY LOUDER.

INDICATES EXHAUSTS WITH A LOUDER THAN STOCK EXHAUST VOLUME THAT CAN BE EFFECTIVELY CONTROLLED WITH A REASONABLE AMOUNT OF THROTTLE CONTROL.

INDICATES EXHAUSTS ARE INTENDED FOR SPECIFIC APPLICATIONS SUCH AS SHOW OR CLOSED COURSE COMPETITION AND WILL REQUIRE SIGNIFICANT THROTTLE CONTROL.

- + These 4" diameter disc-based megaphone series are our "signature" muffler and provide 8-10% horsepower gains.
- + Originally used with our ground breaking 2:1 systems proving they have stood the test of time.
- + Years of flat tracking racing and testing have proven the success of technology these were designed with.
- + Completely rebuildable core and packing to simplify maintenance while saving you time and money.
- + Optional open end caps for closed course competition are available.
- + Add 4" discs to increase horsepower, exhaust tone and flow – it's that easy.
- + Remove 4" discs to reduce sound and increase low-end torque – after all, you do want to hear your music playing.
- + Twelve 4" discs are included with slip-ons and the 2:1 – additional discs are sold separately.
- + Twenty-four 4" discs are included with the 2:2 systems, that's 12 discs for each muffler – additional discs sold separately.
- + Available as slip-ons, 2:1, 2:2 and 2:2 XR style systems – there's something for everyone!
- + Also available as a Universal to fit your unique application – see page 65.

- + Harley riders around the world know that Kerker means performance.
- + These full systems are lighter than stock, allowing you to blow the competition away.
- + Deep signature exhaust tone to warn others they're about to eat your dust.
- + High flowing 2" diameter baffle for increased performance that will give you chills with each throttle twist.
- + Longer lasting and rebuildable "Pillow Pack" packing for low maintenance while saving you time and money.
- + Polished stainless steel turndown end caps with rolled edge give it the classic Kerker look riders love.
- + Available with brushed aluminum and lightweight carbon fiber canisters.
- + Also available as a Universal to fit your unique application – see page 66.

BUELL BLAST

KERKER SYSTEM FOR BUELL BLAST

**V-Twin / Kerker System for Buell
Systems**

Buell Blast '00-08

123-70500 \$395.00

- + Be first with this full system specifically designed for the Buell Blast
- + Unique counterbalance tube and high flow baffle evens out exhaust flow for maximum performance.
- + High temperature black coated head pipe and brushed aluminum canister are light weight yet durable.
- + Core and packing are completely rebuildable simplifying maintenance while saving you time and money.

BUELL X1 LIGHTNING

V-Twin / Superlight Stainless Series for Buell

Internal Disc Slip-Ons

X1 Lightning '99-02	725-71235 \$439.00
M-2 Cyclone '99-02	725-71235 \$439.00
S-3 / T Thunderbolt '98-02	725-71235 \$439.00
S-1 Thunderbolt White Lightning '98	725-71235 \$439.00

- + Back by popular demand - these uphold the high standards of engineering found in every Buell.
- + Don't let the word "light" fool you, this is one tough exhaust for your Buell.
- + This cranks out 4% more horsepower than stock systems without any modifications.
- + Corrosion-free stainless steel and a low-slung look say you mean business.
- + Unlike other replacements, this will not block your oil filter, drain plug or center stand access.
- + Add 4" discs to increase horsepower, exhaust tone and flow - it's that easy!
- + Remove 4" discs to reduce sound and increase low-end torque - it takes hardly any time at all.
- + Fifteen 4" discs are included - additional discs sold separately.

* = Use of an Open End Cap negates the spark arrestor function.

- + Lightweight aluminum body lightens your load for maximum speed.
- + Durable construction and internal disc configuration provide low maintenance while saving you time and money.
- + Integrated U.S. Forest Service approved spark arrestor for endless hours of safe riding.
- + Race and quiet core versions are interchangeable and perfect for track or trail.
- + Add 3" discs to increase horsepower, exhaust tone and flow – it's that easy!
- + Remove 3" discs to reduce sound and increase low-end torque – it hardly takes any time at all.
- + Twelve 3" discs are included with the Quiet Series – additional discs sold separately.
- + Eighteen 3" discs are included with the Racing Series – additional discs sold separately.
- + Also available as a Universal to fit your unique application – see page 66.

- + Designed for sport quads by legendary engine builder, Tom Carlson.
- + Quieter than most pipes on the ATV racing circuit.
- + Stepped head pipe design to maintain broad power delivery throughout the entire power curve.
- + Completely rebuildable core and packing simplifies your maintenance while saving you time and money.
- + U.S. Forest Service approved spark arrestor when used with closed end cap.
- + Add 4" race discs to increase horsepower, exhaust tone and flow – it's that easy!
- + Remove 4" race discs to reduce sound and increase low-end torque – it hardly takes any time at all.
- + Twenty-two 4" race discs and an open end cap are included – additional race discs sold separately.
